Documents	Implementing Sim-Text in PHP based on the Javascript version	2	Some refactoring of the simtext code into the appropriate directories and minor modifications.
Documents	Parsing mulitple-page documents should be possible	3	Cron job setup on server.
Documents	Parsing mulitple-page documents should be possible	5	Identifying issues with wrong bit depth of imagemagick output files, updating parser to work with multiple pages, identifying and fixing local problem with imagemagick not parsing pdfs properly
Documents	Plagiarism detection not working anymore.	1	The response page is now added to the acl of allowed actions for guests and the input params are not choked anymore.
Documents	"Select all" for checkboxes in dehyphen area.	0.5	Changed style for selecting/ unselecting all lines in a page.
Documents	"Select all" for checkboxes in dehyphen area.	1.5	Beautifying dehyphen form
Documents	Remove bibtex from and new document option from fragment form	1	BibTex field was removed from fragment form and moved to document form.
Documents	Save pages in single lines	16	Saving pages in single lines, modifying simtext to support the new page model with single lines.
Documents	Parsing of .txt files	1	Txt files can be parsed now.
Documents	Optimizing the storage of BibTex information	7.5	Several improvements for the bibtex part of the application.
Documents	Documents can be crated by hand as well	1	Documents can be added through a form and not through parsing only.
		39.5	
Files	Downloading files and viewing images not working anymore	2	Fixing but with file downloads
		2	
Fragments	A user can create a fragment by hand	0.5	Fixing bug where hidden bibtex information did not stay hidden when the form was displayed with errors after a submit.
Fragments	A user can create a fragment by hand	2.5	Adds option for editing a fragment and restructures the edit/creation process.
Fragments	A user can create a fragment by hand	4	A user can choose from existing documents or create a new one during fragment creation, many improvements in the interface.
Fragments	A user can create a fragment by hand	4.5	Adding bibtex information to fragment, implementing the single fragment page view with plagiarism text and source text, several changes to the internal fragment structure.
Fragments	A user can create a fragment by hand	4	Initial fragment model structure
Fragments	A user can select a fragment by selecting a part of an ocr scanned document	2	A user can select a part of the document page and then create a fragment
Fragments	A user can select a fragment by selecting a part of an ocr scanned document	3.5	Trying to fix a problem with fragment deletion when deleting a page.
Fragments	A user can approve/decline a fragment	3.5	The ratings are now in the conversation stream as well.
Fragments	A user can approve/decline a fragment	4	Basic fragment approval/decline implementation
Fragments	determine document/fragment per case	3	Fragments, reports and documents are now case-related.
Fragments	Fragment page - move note information to the bottom	0.25	Moves fragment note information to the bottom
Fragments	Make fragment creation from text selection working again	2	Creating fragments from text selection is working again based on the new line-based storing mechanism.
Fragments	Two-column fragment creation	2.5	Adding button to page/show page to switch between single and two-column view for fragment creation, making document selection possible.
Fragments	Two-column fragment creation	4	Updating contextmenu and javascript for fragment creation in order to handle to documents and prefill the fragment form for both sides (candidate and source).
Fragments	Two-column fragment creation	6	Creating a two column view whih enables paging on two documents at the same time.
Fragments	Pages and fragments can not edited	9	Versionable items can now be edited without a optimistic lock exception.

Category	Task	Hours	Description
Fragments	Add required ratings field to case / lock fragments	4.5	Automatic locking of fragments that reached a pre-defined amount of approvals.

Reports	Create simtext report cron and report page	5	Creating cron job the Zend way, creating report list page
Reports	Starting detection report not working	0.5	Fixes bug where user account was removed when startin a plagiarism detection.
Reports	Improvement of reports	4.5	Some bug fixes
Reports		4	Figuring out a problem where the report creation was not working anymore.
Reports		5	Refactoring simtext report page.
		19	
Rights and roles	Add collaborator selection to case form	4.5	Collaborators can be added/removed from a case.
Rights and roles	Finalizing the rights ACL	6.5	ACL Testing, cloning user roles when creating a new case.
Rights and roles	Finalizing the rights ACL	11	Considering inheritantd permissions in ACL, finalizing permission edit form for rights on single objects.
Rights and roles	Finalizing the rights ACL	10	Implementing permission checks in the entire application, creating form for authorizing users for a single object.
Rights and roles	Finalizing the rights ACL	7	Discussing process of permission checking on single objects, implementing permission checks for objects selected in list views.
Rights and roles		5.5	Fixing some bugs in the role management.
		44.5	
System architect	Fix Postfix mail sending on server	3	Figuring out problems with postfix not sending mails.
System architect	Centralising overall properties in the base model	1	Moving created attribute to base model and removing it and its getters/setters from all other objects.
System architect	Any object can be versionable	4.5	Figuring out why new versions were not saved.
System architect	Any object can be versionable	5	
System architect	Any object can be versionable	8	
System architect	Create cronjob	0.5	I moved the crons to the scripts/jobs directory and updated the crontab file.
System architect	Make command line build scripts working in any environment	1.5	Any of our build scripts is accepting a parameter for the environment now
System architect	Move setTarget() from file controller to the case controller	1.5	The target is now defined in the case and is set on a document instead of a file.
System architect	Make actions and states editable	3.5	Adding forms for editing states and actions, adding list view
System architect	Determining memory leak in file parsing process	8.5	Fixing memory leak in file parsing process
System architect	Removing php shorttags	0.5	Fixed bug with php shorttags.
		37.5	
Tags	Add tags	6	Creating a generic form element for adding tags using autocompletion.
Tags	Add tags	3	Investigations concerning using own viewScripts on form elements properly.
		9	
Testing	Error: Class Application_Model_State has no field or association named isRemoved	0.5	Fixing bug where actions and states list views didn't work anymore.
Testing		3	Some overall testing on the website.
Testing		3	General testing, closing tickets, writing mails and other project management stuff.
		6.5	
User	Implement password recovery	2	Adding a 24 hour lock for password recovery requests of a single account.
User	Implement password recovery	2	A user can request a password recovery mail and then follow a link to change it.
User	Implement account removal	2	A user can remove the own account and all data associated with it.
User	Account verification link is not accessible	0.5	
User	Send username in password-recovery mail in the mail text	0.25	
User	Password recovery and account verification page not accessible for guests	0.5	Added 'user_verify' and 'user_recover-password' to the initpermissions script and re-created the guest role on the staging server.
		7.25	
User Interface	Improve create/edit forms	2	Improving process for cases (adds editing cases option), documents (adds editing documents option) and fragments.
User Interface	Combine actions in tables	1	I added the dropdown to documents and fragments list view and put the whole menu into an own partial.
User Interface	More responsive toolbar	1.5	Makes user-menu responsive.
User Interface	Match all styles to all templates	5	Modifying styles of all page-related action sites.
User Interface	Aktuelles und Kontroverses unbenennen	0.5	Removes aktuelles und kontroverses from home page sidebar, adds latest cases to sidebar.
User Interface	Make header background image higher (and wider)	0.5	Adds beta patch as own element, wider and higher header bg image.
User Interface	Make tables responsive	2	All tables are responsive now.
User Interface	Improvements of user interface and bug-fixing	2	Making tables responsive.
User Interface	Improvements of user interface and bug-fixing	0.5	Adding pagination to document page detail view

User Interface	Improvements of user interface and bug-fixing	0.5	Avoiding direct output of html in parsed documents.
User Interface	Improvements of user interface and bug-fixing	1	Refactoring document list page.
User Interface	Improvements of user interface and bug-fixing	2	Uploading test documents, testing crons.
User Interface	Improvements of user interface and bug-fixing	1	Fixing issues in changelog views, creating new abstract controller that offers changelog behavior
User Interface	Improvements of user interface and bug-fixing	0.5	Adding new notifications at several places.
User Interface	Improvements of user interface and bug-fixing	1	Several small improvements to UI, testing on mobile devices as well.
User Interface	Integrating Twitter Bootstrap	1	Making actions button and dropdown menu right aligned in all list views.
User Interface	Integrating Twitter Bootstrap	2.5	Making contextmenu using bootstrap.
User Interface	Integrating Twitter Bootstrap	1.5	Updating all buttons in the application to use bootstrap css, cleaning up styles.css.
User Interface	Integrating Twitter Bootstrap	2	Integrating progress bar for cron tasks.
User Interface	Adding pagination to all page views	1.5	Pagination is now available to all page-related sites.
User Interface	Replace right side actions by a fixed collapsable menu at the right.	1	Some CSS fixes on the right side menu.
User Interface	Replace right side actions by a fixed collapsable menu at the right.	6	Making the actions menu hanging fixed at the right side and adapting the css.
User Interface	Fork me on Github Ribbon	0.25	Replacing the beta patch with a 'fork me on github' ribbon.
User Interface	Add red asterisk to required form fields	0.5	Adds red asterisk to required form fields
User Interface	Add missing translation to language file	3	Added several more translations.
User Interface	Add missing translation to language file	2.5	Adding several translations to the language file.
User Interface	Add language selection before parsing files.	1.5	Add language selection before parsing files.
User Interface		3	Beautifying actions menu, testing.
User Interface		1.5	Fixing some css bugs.
User Interface		4	Improving workflows on the page and css bug fixing (Setting the target document, making form css more cross-browser compatible)
